

Curbing emissions from production is one of five recommendations from the Advertising Association's Ad Net Zero report. AdGreen, the Advertising Association initiative, unites the advertising industry to eliminate the negative environmental impacts of production, enabling the community to measure and understand waste and carbon impacts, empowering them to act for zero waste / zero carbon. Provided free at the point of use to the advertising production community, the project comprises of a carbon calculator, training, resources, and renewable energy and offsetting programmes. A certification programme will follow. AdGreen is based in the UK but with global ambition to enable the industry, wherever the activity is, to act for a sustainable future.

KEY OFFERINGS

- Free training for production and creative teams, and brands
- Free online resources including downloadable Resources Guide with advice for all departments
- Free online carbon calculator tool, to be followed by a certification programme
- Free events
- Opportunity to offset unavoidable emissions via the Creative Offsets Hub, via Ecologi, supporting certified projects around the world
- Free access to albert Creative Energy programme (specific to the UK)

The data collected through the calculator allows AdGreen to provide data insights/benchmarking, which is communicated to the industry at large. The dataset is also used to assess where infrastructure projects can support a faster shift to net-zero – meaning the team can then work with biggest suppliers (transport, studios, generators, equipment) to make this possible.

OFFERINGS RELEVANT TO

- Advertisers (procurement, marketing teams)
- Production consultancies
- Advertising agencies (production depts, creative depts)
- Production companies working on stills and motion projects
- Freelance agency and production company staff as above
- Suppliers of services (including post houses, service companies, studios etc)

KEY TALKING POINTS

- AdGreen exists to support the industry in addressing action point 2 of the broader industry framework, Ad Net Zero, which is curbing emissions from production
- Production emissions come from 4 difference types of activities (and broadly speaking in this order): transport taken, energy used to power spaces, materials used, and waste disposed of
- The responsibility needs to be shared – not thought about only once the script is in production
- Scripts can have emissions 'baked in' if they require travel to a specified location or cast member, or a large lighting set up/set build
- All AdGreen resources are free at the point of use. The project is predominantly funded via a levy on production spend, which is paid by participating advertisers - more here:

<http://bit.ly/AdGreenLevy>

MAIN CALLS TO ACTION

For all (but predominantly advertising agency and production company staff):

- Sign up for the newsletter: <http://eepurl.com/bRsPTL>
- Follow socials
 - Twitter: <https://twitter.com/weareadgreen>
 - Instagram: <https://www.instagram.com/weareadgreen/>
 - LinkedIn: <https://www.linkedin.com/company/weareadgreen/>
- Attend a training session: <https://www.weareadgreen.org/training>
- Attend events: <https://www.weareadgreen.org/events>
- Download the resources guide and explore the resources section online: <https://www.weareadgreen.org/resources>
- Offset unavoidable emissions via Creative Offsets: <https://bit.ly/2JznYCQ>
- Get 100% renewable energy via Creative Energy: <http://bit.ly/3qgpath> (UK only)
- Use the online carbon calculator: <https://www.weareadgreen.org/carbon-calculator>
- Certify a production (once available)
- Support the levy by registering to collect it from participating advertisers if you are providing production services to them directly – more here: <http://bit.ly/AdGreenLevy>

for creatives specifically:

- Avoid 'baking in' emissions into scripts

and for advertisers specifically:

- Choose to contribute to the levy on production spend: <http://bit.ly/AdGreenLevy>
- Discuss the scripts you are presented in terms of 'baked in' emissions
- Require carbon foot-printing data (and certification) as part of procurement process and pre-TX sign off (using AdGreen's calculator will be one way of providing this)
- Stipulate behaviours to accelerate reduction of emissions associated with travel, energy and waste (e.g. max 3 on set from ad agency, 1 client; studio must be powered by renewables etc)

N.B. Companies do not sign up / become a member of AdGreen (unless they are an entity on the Advisory Board, in which case they are a member of the AdGreen Advisory Board).

Individuals can sign up to use the carbon calculator tool (but must be connected to a relevant company).

Principal Production Partners (PPPs) can register as a levy collector, and brands can support AdGreen by paying the levy on relevant spend to their PPPs – collectively, these are 'supporters of the AdGreen levy'.

There are also a number of 'industry partners': suppliers who sponsor events.

AdGreen does not have the capacity to endorse shoots/projects/campaigns/companies, however once the certification programme is launched it will be possible to certify a project and/or campaign using the AdGreen certification framework (based on albert's certification framework).
